

Infectious Diseases – A new challenge for the 21st Century

D.A. Henderson, MD, MPH
Center for Biosecurity, U. of Pittsburgh Medical Center
International Federation of Medical Students'
Association
Baltimore, Maryland
January 15, 2005

1

- 
- *Man's only competitors for the dominion of the planet are the viruses – and the ultimate outcome is not foreordained.*

Joshua Lederberg

2

The competitors are increasing

- The increasing challenges of infectious agents in the 21st century are only beginning to be appreciated
- The sources of the threat:
 - Natural mutation of microbes
 - Emergence of organisms from remote areas
 - Biological terrorism
- The threats are international

3

"Conquest" of the infectious diseases 1950s-70s

- Dramatic changes post WW II
 - Vaccines
 - Antibiotics
 - Nutrition
 - Housing
 - Sanitation
- Decline or elimination of many diseases
 - Smallpox, diphtheria, whooping cough, tetanus, polio, measles, *et alia*

4

- 
- *"One can think of the middle of the 20th century as the end of one of the most important social revolutions in history, the virtual elimination of the infectious diseases as a significant factor in social life"*

Sir Macfarland Burnet

5

A cloud on the horizon

- June, 1981 – first cases of AIDS diagnosed
- April, 1984 – HIV is identified
 - "the triumph of science over a dread disease"
 - "a vaccine will be available in 2 years"
- 2004 -a world-wide pandemic in progress
 - 4th leading cause of death world-wide
 - No vaccine
 - No curative drug

6

HIV is not the only surprise

- 1989 Conference on Emerging Infections
- An illustrative partial new inventory
 - SARS – from Asia
 - Monkeypox – from Africa
 - Anthrax – from ?
 - TSE – “mad cow” disease
 - *H5N1 influenza* – from Asia

7

Increasing numbers of emerging diseases Major causes

- Growth in urban populations
 - Population of cities
 - 1975 – 5 with more than 10,000,000
 - 2004 – 20 with more than 10,000,000
 - 6 with more than 15,000,000
 - By 2015
 - 5 cities with more than 20,000,000 persons
 - 55% of world's population in urban areas

8

Increasing numbers of emerging diseases Major causes

- Growth in urban populations
- International travel
 - Volume
 - 18 million commercial air flights (2000)
 - 1.1 billion air passengers
 - Remote area destinations

9

Increasing numbers of emerging diseases Major causes

- Growth in urban populations
- Travel
- Growth of hospitals in endemic areas
 - Major sites for disease distribution
 - Problem of blood borne diseases
 - Development of antibiotic resistance

10

Increasing numbers of emerging diseases Major causes

- Growth in urban populations
- Travel
- Growth of hospitals in endemic areas
- Food supply
 - Internationalized -- 70% of some fruits and vegetables in U.S. come from developing countries (e.g. green onions, cantaloupe)
 - Industrialized – Feed lots

11

Intentional release of Biological Agents

- A threat, largely ignored until 1995
 - Too difficult to grow organisms
 - Technologically difficult to disseminate
 - Not used because of a moral barrier

12

Watershed Events Aum Shinrikyo -- Japan

- Religious cult released Sarin gas in Tokyo subway (1995)
 - Cult - previously unknown to intelligence
 - Thousands of members, well-funded
 - Tried to aerosolize anthrax and botulinum toxin throughout Tokyo at least 8 times
- Concern – **unknown, non-state sponsored organization, acting without concern for moral deterrents**

13

Watershed events USSR Bioweapons Program

- A secret program – unknown until 1989
- 1992 – Ken Alibek, Deputy Director of USSR bioweapons program, deserts
- 1995 – Full scope of program apparent
 - Bioweapons program alone 60,000+ persons in 50 different labs.

14

"On May 8, 1980, WHO announced that smallpox had been eradicated..Soon after, **smallpox was included in a list of biological weapons targeted for improvement in the 1981-85 Five -Year Plan...**

Where other governments saw a medical victory, the Kremlin perceived a military opportunity...the military command issued an order to maintain an annual stockpile of 20 tons (of smallpox virus)."

Alibek, 1998

15

Russia today

- Over half of the scientists are no longer working in the old weapons labs. Many have gone abroad
- Major production lab for smallpox (Sergiyev Posad) remains a secret facility
- Former Vice-Minister of Health Burgasov admits (2002) aerosolized smallpox was released on Voz Island in 1971 for studies

16

Bioweapons of Greatest Concern

- | | |
|-------------------|--|
| ■ Smallpox | ■ Tularemia |
| ■ Anthrax | ■ Botulinum Toxin |
| ■ Plague | ■ Hemorrhagic fevers
Ebola, Marburg, etc. |

Agents that, if used, could threaten the integrity of civil government

17

A recurrent menace -- influenza

- Influenza – 1918 – H1N1
 - Case-fatality rate - about 1 %
 - Deaths -- U.S. 550,000
World >20,000,000
- Influenza – 2004 – H5N2
 - 48 cases/ 30 deaths

18

Early Detection is Critical but Difficult

- A prevalent myth –
There is a great deal of information available but officials are not collecting the data
- Possible sources for information?
 - Routine reports from health centers
 - Death certificates
 - Hospital reports
 - Laboratory reports
 - Syndromic surveillance

19

What Does History tell us?

- Unusual outbreaks come to attention because of an alert physician and an effective investigation team
 - West Nile encephalitis
 - HIV/AIDS
 - Ebola hemorrhagic disease
 - SARS
 - Anthrax

20

An Agenda for the Future

- Greatly strengthened network of international cooperation and communication
 - Cooperative international centers for epidemiology and laboratory diagnosis in most countries
 - A far more generously supported WHO effort to orchestrate the many national initiatives
- A focused research and development program

21

- 
- "Today's world is truly a global village, characterized by growing concentrations of people in huge cities, increasing global commerce and travel...One can safely predict that infectious diseases will continue to emerge...Depending on present policies and actions, this situation could lead to a catastrophic storm of microbial threats."

*Institute of Medicine/ National Academy of Sciences
Microbial Threats to Health, 2003*

22

- 
- "No responsible assessment of microbial threats to health in the 21st century could end without a call to action. The magnitude and urgency of the problem demand renewed concern and commitment. We have not done enough – in our own defense or in the defense of others."

*Institute of Medicine/ National Academy of Sciences
Microbial Threats to Health, 2003*
